

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	3 October 2026
Team ID	SWTID-2026-3698
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare
 1 hour to collaborate
 2-8 people recommended

 **Before you collaborate**

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

A Team gathering
Students, teachers, IT agents, a ServiceNow developer and school admin joined the session.

B Set the goal
Automate IT ticket classification to cut manual effort and speed up routing using Flow Designer.

C Follow the brainstorming rules
Stay on topic, defer judgment, go for volume and encourage wild ideas.

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

PROBLEM

How might we automatically classify and route school IT helpdesk tickets (Wi-Fi, projector, password and slow-computer issues) the moment they are created, so IT staff spend less time on manual work and callers get instant acknowledgement?

**Key rules of brainstorming**

To run an smooth and productive session

 Stay in topic.

 Encourage wild ideas.

 Defer judgment.

 Listen to others.

 Go for volume.

 If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Ideas listed by each participant (one sticky note per idea):

Caller view	IT Agent view	Developer view	Admin view
Enter only Caller and Short Description	Auto-fill Category and Subcategory	Keyword matching in Short Description with Flow Designer	Track SLA and resolution time
Instant email confirmation after submission	Auto-assign to the right support group	Dependent Subcategory choices based on Category	Dashboard of ticket trends by category
Show ticket status in an easy form	Flag tickets that could not be classified	Custom table with auto-numbered records	Export update set to move between instances

Idea grouping (clusters):

Cluster	Ideas grouped together
Automatic classification	Keyword matching in Short Description; auto-fill Category and Subcategory; flag unclassified tickets
Structured data capture	Custom table with auto number; dependent Category and Subcategory choices; standard fields for Caller, State, Group
Caller communication	Enter only Caller and Short Description; instant email confirmation; ticket status visibility
Routing and monitoring	Auto-assign to support group; SLA tracking; trend dashboard
Deployment and reuse	Export update set to XML and share to another instance

Step-3: Idea Prioritization

Ideas scored on impact versus effort:

Idea	Impact	Effort	Priority	Decision
Keyword-based auto classification (Flow Designer)	High	Low	High	Build in this project
Dependent Category and Subcategory choices	High	Low	High	Build in this project
Automatic email confirmation to caller	High	Low	High	Build in this project
Custom table with auto number and standard fields	High	Medium	High	Build in this project
Export update set for sharing	Medium	Low	Medium	Build in this project
Auto-assign to support group	Medium	Medium	Medium	Future enhancement
SLA tracking	Medium	High	Low	Future enhancement

Predictive Intelligence / ML classification	Medium	High	Low	Future enhancement
---	--------	------	------------	--------------------

Outcome: the high-priority ideas form the final solution — a no-code Flow Designer flow that classifies incidents from the Short Description, backed by a custom table with dependent choice fields and an automatic email notification to the caller.
