

Project Design Phase Solution Architecture

Date	3 October 2026
Project ID	SWTID-2026-3698
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

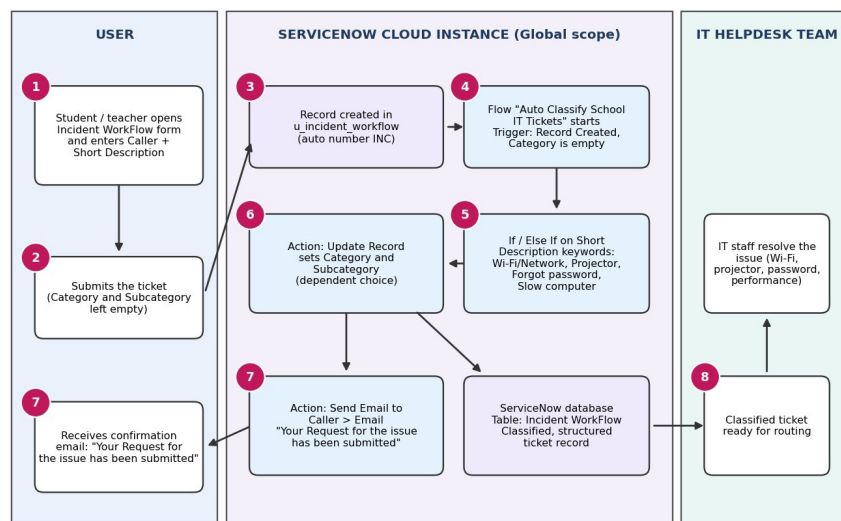

Figure 1: Architecture and data flow of the automated school IT ticket classification solution

Data flow: (1) The student or teacher opens the Incident WorkFlow form and enters the Caller and Short Description, (2) submits the ticket with Category and Subcategory left empty, (3) a record is created in the u_incident_workflow table with an auto number, (4) the record creation triggers the Flow Designer flow 'Auto Classify School IT Tickets' because Category is empty, (5) the flow checks the Short Description for keywords using If / Else If conditions, (6) the Update Record action sets Category and Subcategory (Subcategory is a dependent choice on Category), (7) the Send Email action sends a confirmation to the caller, and (8) the classified ticket is ready for the IT helpdesk team to route and resolve.

Implementation Screenshots:

The screenshots below show each part of the architecture running in ServiceNow.

Application logic: Flow Designer

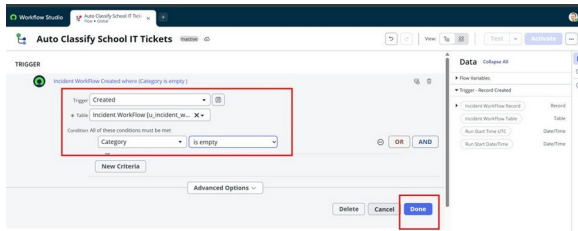

Figure 2: Flow trigger (Record Created, Category is empty)

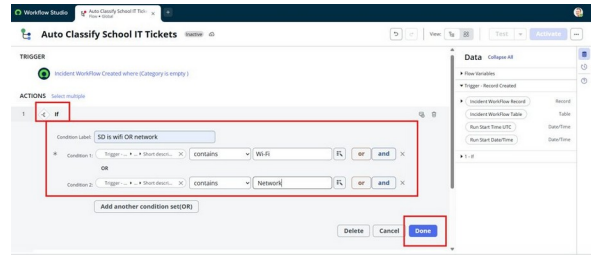

Figure 3: If condition on Short Description (Wi-Fi or Network)

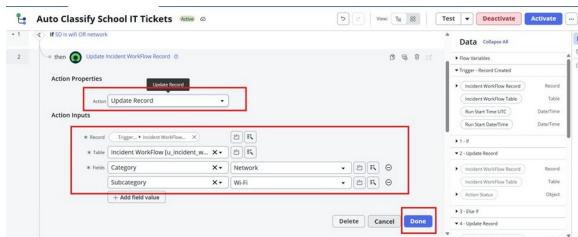

Figure 4: Update Record action (Category = Network, Subcategory = Wi-Fi)

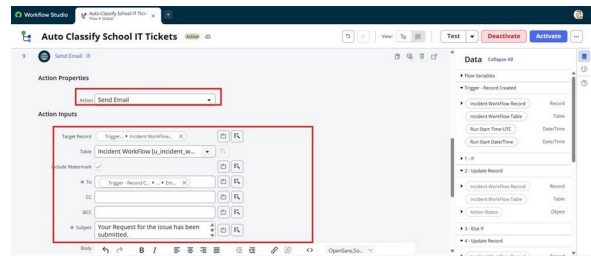

Figure 5: Send Email action to the caller

Data model and user interface: Incident Workflow table

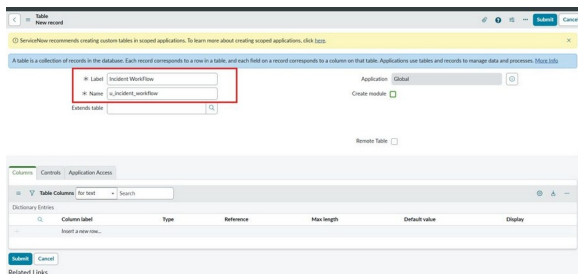

Figure 6: Custom table Incident WorkFlow (u_incident_workflow)
